DETAILED ACTION

Claim Rejections - 35 USC § 103

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claim 1 is rejected under 35 U.S.C. 103(a) as being unpatentable over US Patent 6,763,606 to Saida in view of US Patent 3,745,306 to Naritomi.

3. Saida teaches a hairdressing apparatus comprising steam generator 27 and ionizing particle generator 2. Note column 7, line 60- column 8, line 18 and Figure 21a. Saida does not teach a selecting unit such that injection of either steam or ions may be selected. Naritomi teaches a similar apparatus comprising steam generator 8, blower 3, and switches 5 and 9 for selectively operating either or both of the steam generator 8 and blower 3. Note column 4, lines 16-22. As Naritomi teaches that having switch mechanisms such that separate treatments can be controlled separately leads to more treatment options, it would have been obvious to one of ordinary skill in the art to modify the dual function apparatus of Saida with the dual switches on Naritomi. Regarding the limitation that the steam generator is separate from a hand held steam injector, such a modification would have been obvious to one of ordinary skill in the art since it has been held that constructing a formerly integral structure in various elements involves only routine skill in the art. *Nerwim v. Erlichman*, 168 USPQ 177, 179.

4. Claim 2 is rejected under 35 U.S.C. 103(a) as being unpatentable over Saida in view of Naritomi as applied to claim 1 above, and further in view of Shye-Long.

5. Saida, as modified by Naritomi, does not teach a switching mechanism that requires continual holding. Shye-Long teaches a similar hair treating apparatus comprising switch 1 that must be held continuously during operation. Note column 2, lines 30-38. As Shye-Long teaches that a continuously held switch provides safer operation, it would have been obvious to one of ordinary skill in the art to modify the apparatus of Saida, as modified by Naritomi, with the switch of Shye-Long.
